HoverFile fact sheet

Updated November 23, 2026

Overview

HoverFile is a client file-delivery service built for commercial drone pilots. It replaces generic folder links with a portal that carries the pilot's business name and logo. Clients open a link, enter an access code, and download files without creating an account.

Product at a glance

- Who it serves: Commercial drone pilots, photographers, videographers, and other media professionals.
- File delivery: Any file type, up to 50 GB per file, delivered in original quality.
- Client activity: Shows when clients visit the portal and which files they download.
- Project life: Projects expire 14 days after creation, and files are removed automatically. Project details remain available to the account owner.

Pricing and getting started

$99 per year for unlimited projects, files, and storage within the 14-day project period. Users can create projects, upload files, and preview their client portals for free. Payment is required to share with clients. See the website for current pricing.

Creator and company

Ben Hymans, a technology consultant and FAA Part 107 pilot, created HoverFile to improve how he delivered large media files to his clients. HoverFile is a product of Hytreks LLC.
